

RESTAURANT SALES & CUSTOMER BEHAVIOR ANALYSIS

USING TABLEAU

Prepared by:
Padmapriya Ganesh
Business Analyst

Project Objective:

To analyze restaurant sales performance, customer ordering behavior, and profitable combo meal opportunities using data visualization and market basket analysis.

Tools Used:

- Tableau
- MS Excel

Business Objectives

The following business questions were addressed during the analysis:

1. Identify the top-selling products and product categories.
2. Determine the days and hours with the highest sales activity.
3. Analyze customer ordering patterns and purchasing behavior.
4. Conduct Market Basket Analysis to identify profitable combo meal opportunities.
5. Generate business recommendations to improve sales and customer experience.

Methodology & Process of Analysis

Data Preparation

- Cleaned and prepared raw restaurant sales data using MS Excel.
- Verified data consistency, missing values, and relationships between tables in Tableau.
- Applied appropriate data types for date, sales, and quantity fields.

Measures (Calculations) Created

The following measures, calculations and calculated fields were used/created to support analysis:

- Gross Sales
- Total Discount
- Net Sales
- Average Net Sales
- Average Gross Sales
- Average Daily Sales
- Total Bills
- Total Items Sold
- Bills With Both
- Confidence
- Lift
- Qty Tie-In %

Analytical Techniques Used

- Sales Trend Analysis
- Product Performance Analysis
- Customer Order Pattern Analysis
- Market Basket Analysis
- Cross-Selling Opportunity Analysis

Top-Selling Products Analysis

Top-Selling Products Analysis - Net Sales by Category

Dine-in vs Take-Away (Distinct Bills)

Dine-in vs Take-Away (Total Dosas sold)

Measures

Total Quantity Sold	586
Gross Sales	52,540
Sales discount amount	13,170
Net Sales	39,370
No. of distinct bills	254
Average net Sales	67
Average gross Sales	90
Average daily net sales	2,812

Top-Selling Products Analysis - Top-Selling Dosas

Top-Selling Product Analysis

Top-Selling Products & Categories

KEY FINDINGS

- Pizza Dosa emerged as the highest revenue-generating product.
- Plain Dosa and Stump/Hatrick Dosa also showed strong sales performance (along with Mushroom Chilli Cheese, Paneer Chinese Mushroom, Paneer Cheese).
- Fusion Vintage and Fusion Special categories generated the highest category-level sales, followed by Fusion Doubles, and Fusion Economy.

INSIGHTS

- Customers showed strong preference toward fusion-style, paneer-based and cheese-based dosas.
- Premium fusion products generated higher revenue contribution than traditional items.
- Pizza Dosa acted as the strongest “anchor product” across the menu.

BUSINESS RECOMMENDATION

- Promote Pizza Dosa as a flagship menu item.
- Expand high-performing fusion categories with additional variants.

- Use best-selling products in combo meals and promotional offers.
- Consider reducing promotional focus on very low-performing products unless they serve a niche demand.

Top-Selling Product Analysis

Additional Insights: Dine-in vs Take-away Analysis

INSIGHTS

Insight 1: Revenue is heavily driven by dine-in customers

Out of **254 distinct bills**, **243 (95.7%)** were dine-in orders, while **only 11 (4.3%)** were take-away orders. This indicates that the restaurant's sales performance is highly dependent on the dine-in customer segment.

Insight 2: Product demand is overwhelmingly concentrated in dine-in orders

Of the **586 dosas sold**, **565 (96.4%)** were consumed by dine-in customers, compared to **only 21 (3.6%)** through take-away orders. This suggests that customers primarily prefer experiencing the restaurant's offerings on-premise rather than ordering them for take-away.

Insight 3: Strong correlation between customer visits and product sales

The near-identical distribution of bills and dosas sold across dine-in and take-away categories indicates that higher product sales are largely driven by greater customer footfall rather than unusually large order sizes.

Insight 4: Average daily revenue demonstrates healthy sales performance

The restaurant generated an **average daily net sales value of ₹2,812**, indicating a consistent daily revenue stream. Maintaining current customer traffic levels while increasing average order value through combo meals or upselling could further improve daily revenue.

Insight 5: Opportunity to expand take-away sales

Although take-away orders currently represent a small share of total sales, they also highlight a potential growth opportunity. Introducing targeted promotions, delivery partnerships, or combo meal offerings could help increase take-away revenue without affecting the strong dine-in business.

- 95.7% of bills are dine-in.
- 96.4% of dosas sold are dine-in.
- Average daily net sales = ₹2,812, with take-away representing an untapped growth opportunity.

Overall Daily & Hourly Sales Analysis

Date-wise Net Sales & Quantity Sold

Hourly Net Sales

Daily & Hourly Sales Analysis

Overall Daily & Hourly Sales Analysis

Key Findings

- 6th March recorded the highest net sales and item quantity sold, followed by 7th and 8th March.
- Sales activity was consistently stronger between 8 PM and 11 PM.
- Late evening hours generated the highest average hourly sales.

Insights

- Customer demand is heavily concentrated during dinner hours.
- Weekend and early-month periods showed stronger restaurant activity.
- High evening traffic indicates strong potential for dinner combo promotions.

Business Recommendation

- Increase staffing during peak evening hours.
- Launch dinner-specific offers between 8 PM–11 PM & during slower sales periods to improve consistency.
- Use peak-hour sales trends for inventory planning and operational efficiency. Promote high-performing menu items during peak order windows.
- Investigate reasons behind declining sales trends after early March.
- Monitor repeat customer behavior and customer retention patterns.

Top-Selling Products Per Day Analysis pt.1

Top-Selling Dosas - Daily Total Quantity Sold

Top-Selling Dosas - Daily Net Sales

Top-Selling Products per Day

Part 1 - Product Performance by Day

KEY FINDINGS

- Pizza Dosa consistently remained one of the top-selling products across multiple days.
- Paneer-based and cheese-based products repeatedly appeared among daily best-sellers.
- Mushroom Chilli Cheese and Paneer Chinese Mushroom showed stable repeat demand.

INSIGHTS

- Customers consistently preferred spicy/schezwan, cheesy, and paneer-based combinations.
- Product demand remained relatively stable across multiple sales days.
- Fusion “comfort + indulgence” products demonstrated stronger repeat-purchase behavior than niche/experimental items.

COMBO STRATEGY

The strong pairing patterns suggest:

- Paneer + Cheese combos
- Schezwan + other dosa combos
- Mushroom + Cheese combos

BUSINESS RECOMMENDATION

- Maintain strong stock availability for top-performing fusion (cheese, paneer, pizza dosa) products & Reduce waste by limiting rarely ordered items.
- Introduce rotating “Daily Bestseller” promotions.
- Highlight repeat-performing items on digital and physical menus.

Top-Selling Products Per Day Analysis pt.2

Top 10 Best Selling Dosas - Total Quantity Sold

Top 10 Best Selling Dosas - Net Sales

Top-Selling Products per Day

Part 2 - Product Sales Trends Across Days

KEY FINDINGS

This analysis highlights that top-selling products do not perform uniformly across all days, and instead show:

- strong demand spikes on specific dates
- recurring high-performance products across the timeline
- clear “peak vs low demand” cycles

- Pizza Dosa achieved the highest quantity sold across most dates.
- Plain Dosa displayed strong repeat ordering behavior despite being a basic menu item.
- Paneer Cheese and Mushroom Chilli Cheese showed strong recurring sales patterns.

A key pattern observed:

- High quantity days ≠ always highest net sales per product
- Some days show: high volume but lower per-item value; while others show fewer orders but higher-value items

INSIGHTS

- Basic menu items such as Plain Dosa act as strong supporting products.
- Customers frequently combine premium fusion products with simpler items.
- Consistent repeat purchases indicate strong customer satisfaction for top products.

Peak days are not driven by a single item — instead:

- multiple top products peak together
- indicating overall demand surges rather than isolated popularity

BUSINESS RECOMMENDATION

- Use Pizza Dosa and Plain Dosa as combo anchors. Always maintain buffer stock for these 2 along with Paneer Cheese variants.
- Promote high-repeat products through loyalty or recommendation systems.
- Create “Most Ordered Today” sections in menus.

Customer Order Pattern Analysis

Part 1 - Customer Order Quantity Analysis

KEY FINDINGS

- Most bills contained 1–3 items.
- Several high-value bills contained 5–12 items.
- Certain customers consistently ordered multiple products together.

INSIGHTS

- Customers prefer bundled or combination-style ordering rather than single-item purchases.
- Large orders indicate group dining or family-ordering behavior.
- High multi-item transactions create strong upselling opportunities.

BUSINESS RECOMMENDATION

- Introduce family combo meals and sharing platters.
- Provide incentives for higher-order-value transactions.
- Recommend add-on products during checkout.

Items Ordered Together

Quantity Ordered

Customer Order Pattern Analysis

Part 2 - Items Ordered Together

KEY FINDINGS

Common item combinations included:

- Pizza Dosa + Paneer Cheese
- Mushroom Chilli Cheese + Paneer Cheese
- Pizza Dosa + Plain Dosa
- Paneer Chinese Mushroom + Paneer Cheese
- Schezwan Butter Onion + Plain Dosa

INSIGHTS

- Customers display strong preference for cheese-heavy and spicy combinations.
- Paneer-based items act as strong secondary purchases.
- Customers rarely build large bundles; instead they prefer: 1 base dosa + 1 fusion topping item
- Repeated pairing suggests strong cross-sell potential between core + fusion items

BUSINESS RECOMMENDATION

- Design combo meals around common item pairings.
- Use cross-selling recommendations within menus.
- Train staff to upsell frequently paired products.

Customer Order Pattern Analysis

Part 3 - Category-Level Basket Patterns

KEY FINDINGS

- Fusion Vintage, Fusion Doubles, and Fusion Special categories frequently appeared together in customer baskets.
- Customers commonly combined premium fusion products with spicy and schezwan variants.

INSIGHTS

- Customers prefer variety-oriented ordering behavior.
- Fusion-style products dominate cross-category transactions.
- Premium fusion categories create strong cross-selling potential.

DOMINANT CATEGORY TRENDS

- Fusion Vintage → most frequently recurring across receipts
- Fusion Economy → consistently high-volume, budget-driven segment
- Fusion Spicy & Fusion Doubles → strong secondary contributors

BUSINESS RECOMMENDATION

- Create category-based combo offers.
- Introduce “Fusion Special” recommendation sections.
- Bundle high-performing categories into curated meal packages.

Market Basket Analysis

Market Basket Analysis & Combo Recommendations

KEY FINDINGS

- Pizza Dosa was the strongest basket anchor product.
- Plain Dosa, Paneer Cheese, and Mushroom Chilli Cheese displayed strong basket associations.
- Several item pairs showed extremely high Lift values, indicating strong product relationships.

STRONG SCALABLE COMBOS

- Pizza Dosa + Paneer Chilli
- Mushroom Chilli Cheese + Pizza Dosa
- Mexican Salsa + Pizza Dosa
- Kaju Paneer Cheese + Pizza Dosa
- Plain Dosa or Schezwan Butter Onion + Pizza Dosa

HIGH-LIFT “POWER PAIRINGS”

- Alleppey Special + Chinese Mushroom
- American Chopsuey + Sweet Corn Baby Corn
- Green Peas Chilli + Mix Veg Dosa

INSIGHTS

- Customers strongly prefer combination-based ordering.
- High-volume combos provide scalable business opportunities.

For example: Cheese Lovers Combo: Paneer Cheese + Mushroom Chilli Cheese, Gobi Cheese + Pizza Dosa, American Chopsuey Cheese + Pizza Dosa

- High-lift niche combinations can be used for limited-time offers.

BUSINESS RECOMMENDATION

- Create Pizza Dosa-based combo meals.
- Promote premium fusion bundles.
- Use high-lift niche pairings for targeted promotions.

Market Basket Analysis

1. HIGH-VOLUME ANCHOR PRODUCTS

The volume table shows that the strongest basket anchors are:

Product	Qty Sold With Basket Item
Pizza Dosa	62
Plain Dosa	42
Paneer Cheese	23
Mushroom Chilli Cheese	21
Paneer Chilli	15
Paneer Chinese Mushroom	15
Schezwan Butter Onion	15
Butter Plain Dosa	15

Insight
Pizza Dosa is the strongest anchor product, followed by Plain Dosa. These should be used as the base items for scalable combo meals because they already appear frequently in customer baskets.

2. STRONG SCALABLE COMBINATIONS

These are not necessarily the highest lift pairs, but they are more commercially useful because they appear across multiple bills.

Combo Pair	Bills With Both	Lift	Interpretation
Paneer Chilli + Pizza Dosa	6	2.25	Strong high-volume combo
Mushroom Chilli Cheese + Pizza	6	1.63	Popular fusion pairing
Mexican Salsa + Pizza Dosa	5	3.49	Strong cross-sell opportunity
Kaju Paneer Cheese + Pizza	5	3.05	Premium combo opportunity
Dubai Dosa + Paneer Cheese	4	3.4	Good fusion-pairing signal
American Chopsuey Cheese	4	2.79	Strong Indo-fusion pairing
Gobi Cheese + Pizza Dosa	4	2.79	Vegetarian combo opportunity
Mushroom Chilli Cheese + Paneer	4	2.45	Cheese-heavy combo pattern

Insight
For practical menu design, these are better combo candidates than extremely rare 254-lift pairs because they combine meaningful volume + positive association.

3. HIGH-LIFT NICHE “POWER PAIRINGS”

These pairs have very high Lift, meaning they are strongly associated when they appear together.

Combo Pair	Lift	Interpretation
Alleppey Special + Chinese Mushroom	254	Perfect exclusive pair
Aloo Plalak + Green Peas Dosa	127	Strong rare-pair association
American Chopsuey + Sweet Corn Baby	127	Niche bundle opportunity
Aloo Plalak + Schezwan Aloo Dry	84.67	Highly specific pairing
Green Peas Chilli + Mix Veg Dosa	63.5	Strong niche veg pairing
Green Peas Chilli + Masala Chilli	63.5	Strong spicy pairing
Chinese Mushroom + Schezwan Paneer	50.8	Strong Chinese-fusion pairing
Masala Cheese + Schezwan Baby	50.8	Strong spicy-cheese combo
Alleppey Special + Schezwan Paneer	50.8	Premium niche pairing

Important interpretation
These are not automatically the most profitable combos because many appear in only 1 bill. They are better described as: “exclusive niche pairings with high cross-sell strength, suitable for experimental or limited-time combo offers.”

Additional Business Insights & Limitations of Analysis

Additional Insights Discovered

- Fusion-style products outperform traditional products in revenue generation.
- Cheese-based and paneer-based products consistently appear in high-performing combinations.
- Evening hours generate the highest customer traffic and sales.
- Customers demonstrate strong preference for combination ordering behavior.
- Menu engineering opportunities exist through strategic combo design and upselling.

Limitations

- The dataset covered a limited time period.
- Seasonal and long-term customer trends could not be evaluated.
- Customer demographic information was unavailable.
- Profit margins per product were not provided.
- Certain high-lift combinations were based on low-frequency transactions.

Despite these limitations, the analysis successfully identified meaningful customer ordering patterns and business opportunities.

Recommendations & Next Steps

Next Steps

To make business analytics an integral part of decision-making, the restaurant should:

Recommendations

1. Introduce combo meals centered around Pizza Dosa and Plain Dosa.
2. Use high-performing fusion products in promotional campaigns.
3. Promote high-lift niche pairings as limited-time offers.
4. Optimize staffing and inventory during peak evening hours.
5. Use cross-selling recommendations in menus and billing systems.

Continuously collect and analyze transaction data.

Track customer purchase behavior regularly.

Monitor combo performance and profitability.

Build dashboards for real-time sales monitoring.

Use predictive analytics for demand forecasting and inventory planning.

Conclusion

This analysis successfully identified:

- Top-selling products and categories
- Customer ordering patterns
- Peak sales periods
- Strong cross-selling opportunities
- Profitable combo meal recommendations

The use of Tableau, Calculations & Calculated Fields (LOD - Level of Detail - Expressions), and Market Basket Analysis helped transform raw restaurant sales data into actionable business insights.

These findings can help the restaurant:

- Improve customer experience
- Increase average order value
- Optimize menu design
- Enhance operational decision-making
- Drive higher profitability through data-driven strategies
